Re: Public Reporting of District Performance Related to Performance Indicators 1 Through
6 and 12 of the State Performance Plan

As required by sections 616(b)(1)(A) and 642 of the Individuals with Disabilities Education Act (IDEA), each state must have in place a State Performance Plan (SPP) that evaluates the state's efforts to implement the requirements and purposes of Part B of the IDEA, and describes how the state will improve its implementation and outcomes for students with disabilities. Section 616(b)(2) requires that the state report annually to the U.S. Department of Education on its performance under the State Performance Plans for Part B of the IDEA. Specifically, the state must report, in its Annual Performance Report (APR), on its progress in meeting the measurable and rigorous targets it established in its SPP.

In addition to the above requirements, 20 U.S.C. 1416(b)(2)(C)(ii) and 34 CFR 600.602, the state must report annually to the public on the performance of each local educational agency located in the state on the targets in the State's Performance Plan. Because baseline data and/or performance targets have not been established for all 20 of the performance indicators, the U.S. Department of Education, Office of Special Education Programs (OSEP), has informed states that they are only required to report district performance for students with disabilities on indicators 1-6 and 12 this year. These performance indicators address the following: Graduation, Dropout, Assessment, Suspension/Expulsion, Least Restrictive Environment (ages 6-21), Preschool Least Restrictive Environment (ages 3-5), and Early Childhood Transition (transition from Part C to Part B).

The district's performance data is 2005-2006 data that was submitted by the district to the OPI as a part of its child count, exiting and student discipline reporting. We wish to thank districts for their timely submission of data necessary for this report, and we wish to thank the directors of special education for their time and attention as we presented information this past year on these new reporting requirements and other changes that occurred as a result of IDEA 2004.

Each district's performance report consists of seven separate pages, one for each of the performance indicators. The page will identify the performance indicator and its number (the number refers to the indicator number in the State Performance Plan), the data source for the indicator, special education count, special education count for the particular indicator, the upper and lower limit of the confidence interval, the state performance indicator target and the district's performance status for the indicator (far right column). Data notes have been provided under each of the reports to assist you in interpreting the data.

You are encouraged to review your district's report carefully.

Following is a link to the districts' performance reports under IDEA.

<http://www.opi.mt.gov/PDF/SpecED/sip/06DistrictPerfRpt.pdf>

Questions regarding these reports should be directed to Marilyn Pearson at 406-444-4428 or e-mail at mpearson@mt.gov

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0861 Absarokee Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0861 Absarokee Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0861 Absarokee Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	28	1 (100%)	0.87938	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0861 Absarokee Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0861 Absarokee Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	32	15	0.47 (47%)	0.24969	0.70054	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	32	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	32	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0861 Absarokee Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0861 Absarokee Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0862 Absarokee H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0862 Absarokee H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0862 Absarokee H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0862 Absarokee H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0862 Absarokee H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0862 Absarokee H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0577 Alberton K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0577 Alberton K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	15	5	0.33 (33%)	0.08664	0.72481	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0577 Alberton K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	34	32	0.94 (94%)	0.80352	0.98429	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	34	13	0.38 (38%)	0.17553	0.64283	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	30	7	0.23 (23%)	0.05886	0.59672	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	30	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	30	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0577 Alberton K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0577 Alberton K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0536 Alder Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0536 Alder Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0536 Alder Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0536 Alder Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0536 Alder Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0376 Amsterdam Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0376 Amsterdam Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0376 Amsterdam Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0376 Amsterdam Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0376 Amsterdam Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0376 Amsterdam Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0376 Amsterdam Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0236 Anaconda Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0236 Anaconda Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	194	190	0.98 (98%)	0.94774	0.99203	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	194	68	0.35 (35%)	0.24788	0.46913	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0236 Anaconda Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	18	18	1 (100%)	0.82415	1.00001	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0236 Anaconda Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0237 Anaconda H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	11	10	0.91 (91%)	0.6063	0.98487	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0237 Anaconda H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	66	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0237 Anaconda H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	34	28	0.82 (82%)	0.64646	0.92256	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0237 Anaconda H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0237 Anaconda H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	66	11	0.17 (17%)	0.0446	0.46123	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	66	6	0.09 (9%)	0.01021	0.49089	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	66	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0237 Anaconda H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0366 Anderson Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0366 Anderson Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0366 Anderson Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0366 Anderson Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0366 Anderson Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0366 Anderson Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0474 Arlee Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0474 Arlee Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

0474 Arlee Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	56	50	0.89 (89%)	0.7776	0.95208	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	56	13	0.23 (23%)	0.08252	0.50393	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name

0474 Arlee Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	36	22	0.61 (61%)	0.4059	0.78329	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	36	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	36	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0474 Arlee Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0474 Arlee Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0475 Arlee H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

For School Year: 2005-2006

District Name

0475 Arlee H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	19	1	0.05 (5%)	0.00061	0.81451	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	16	16	1 (100%)	0.80643	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0475 Arlee H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0475 Arlee H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1215 Arrowhead Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1215 Arrowhead Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1215 Arrowhead Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1215 Arrowhead Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1215 Arrowhead Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1215 Arrowhead Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0800 Ashland Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0800 Ashland Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	18	6	0.33 (33%)	0.09673	0.70001	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	18	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	18	1	0.06 (6%)	0.00069	0.81564	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0800 Ashland Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0800 Ashland Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0498 Auchard Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

0498 Auchard Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0498 Auchard Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0498 Auchard Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0502 Augusta Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0502 Augusta Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0502 Augusta Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0502 Augusta Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0502 Augusta Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0502 Augusta Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0503 Augusta H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0503 Augusta H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0503 Augusta H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0503 Augusta H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0503 Augusta H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0503 Augusta H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0503 Augusta H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0720 Avon Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0720 Avon Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0720 Avon Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5C	Education Environment Rate -- Sep Schls	10	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0720 Avon Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0720 Avon Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1218 Ayers Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1218 Ayers Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1218 Ayers Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1218 Ayers Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1218 Ayers Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1218 Ayers Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1218 Ayers Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0785 Bainville K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0785 Bainville K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0785 Bainville K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0785 Bainville K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0785 Bainville K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0785 Bainville K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0785 Bainville K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0244 Baker K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0244 Baker K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	12	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0244 Baker K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	30	32	1 (100%)	0.89285	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0244 Baker K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0244 Baker K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	39	23	0.59 (59%)	0.39037	0.76343	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	39	3	0.08 (8%)	0.00408	0.62479	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	39	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0244 Baker K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0244 Baker K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0455 Basin Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0455 Basin Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0455 Basin Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0455 Basin Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0455 Basin Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0048 Bear Paw Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0048 Bear Paw Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0048 Bear Paw Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0048 Bear Paw Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0048 Bear Paw Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0048 Bear Paw Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0048 Bear Paw Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0006 Beaverhead County H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0006 Beaverhead County H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	24	1	0.04 (4%)	0.00035	0.81024	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0006 Beaverhead County H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0006 Beaverhead County H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0006 Beaverhead County H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	24	10	0.42 (42%)	0.17901	0.70055	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	24	3	0.12 (12%)	0.0103	0.66074	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	24	1	0.04 (4%)	0.00035	0.81024	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0006 Beaverhead County H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0006 Beaverhead County H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0076 Belfry K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0076 Belfry K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0076 Belfry K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0076 Belfry K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

0076 Belfry K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0076 Belfry K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0076 Belfry K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0368 Belgrade Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0368 Belgrade Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0368 Belgrade Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	228	234	1 (100%)	0.98385	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	228	83	0.36 (36%)	0.26867	0.47143	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0368 Belgrade Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0368 Belgrade Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	152	101	0.66 (66%)	0.56786	0.74903	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	152	6	0.04 (4%)	0.00213	0.43624	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	152	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0368 Belgrade Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	31	10	0.32 (32%)	0.12064	0.62296	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0369 Belgrade H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	19	17	0.89 (89%)	0.67148	0.97251	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0369 Belgrade H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	66	2	0.03 (3%)	0.00039	0.67789	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0369 Belgrade H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	42	40	0.95 (95%)	0.83829	0.98722	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0369 Belgrade H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

0369 Belgrade H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	66	28	0.42 (42%)	0.26146	0.60529	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	66	14	0.21 (21%)	0.07451	0.47365	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	66	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0369 Belgrade H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0369 Belgrade H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0112 Belt Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0112 Belt Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	28	30	1 (100%)	0.88651	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	28	10	0.36 (36%)	0.14124	0.65232	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0112 Belt Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0112 Belt Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0113 Belt H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0113 Belt H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	10	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0113 Belt H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0113 Belt H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name

0113 Belt H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	10	5	0.5 (50%)	0.17039	0.8296	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	10	2	0.2 (20%)	0.01755	0.77696	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	10	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0113 Belt H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0171 Benton Lake Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0171 Benton Lake Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0171 Benton Lake Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0171 Benton Lake Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0171 Benton Lake Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0171 Benton Lake Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0171 Benton Lake Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0692 Biddle Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0692 Biddle Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0692 Biddle Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0692 Biddle Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0692 Biddle Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0692 Biddle Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0380 Big Dry Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0380 Big Dry Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name

0380 Big Dry Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0380 Big Dry Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

0380 Big Dry Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0137 Big Sandy Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0137 Big Sandy Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0137 Big Sandy Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0137 Big Sandy Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0137 Big Sandy Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	10	6	0.6 (60%)	0.25239	0.86955	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	10	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	10	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0137 Big Sandy Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0137 Big Sandy Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0138 Big Sandy H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0138 Big Sandy H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0138 Big Sandy H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0138 Big Sandy H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0138 Big Sandy H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0138 Big Sandy H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0138 Big Sandy H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0865 Big Timber Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0865 Big Timber Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0865 Big Timber Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	30	32	1 (100%)	0.89285	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	30	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	30	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0865 Big Timber Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0330 Bigfork Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0330 Bigfork Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0330 Bigfork Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	88	82	0.93 (93%)	0.85579	0.96922	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	88	36	0.41 (41%)	0.26493	0.57078	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0330 Bigfork Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0330 Bigfork Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	50	16	0.32 (32%)	0.14663	0.56304	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	50	3	0.06 (6%)	0.00251	0.61151	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	50	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0330 Bigfork Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0331 Bigfork H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0331 Bigfork H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	26	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0331 Bigfork H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	10	1 (100%)	0.72251	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0331 Bigfork H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0331 Bigfork H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	26	26	1 (100%)	0.8713	1.00001	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	26	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	26	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0331 Bigfork H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0331 Bigfork H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0965 Billings Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0965 Billings Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	1806	1754	0.97 (97%)	0.96229	0.97806	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	1806	579	0.32 (32%)	0.28387	0.35969	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0965 Billings Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5C	Education Environment Rate -- Sep Schls	1264	21	0.02 (2%)	0.00126	0.18141	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0965 Billings Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	212	123	0.58 (58%)	0.49183	0.66368	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0965 Billings Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0966 Billings H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	144	103	0.72 (72%)	0.62161	0.79346	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0966 Billings H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	737	37	0.05 (5%)	0.01328	0.1717	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0966 Billings H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	342	338	0.99 (99%)	0.97017	0.99547	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	342	80	0.23 (23%)	0.15467	0.33754	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0966 Billings H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0966 Billings H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	737	225	0.31 (31%)	0.2488	0.36831	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	737	238	0.32 (32%)	0.26674	0.38474	0.12 (12%)	Not Met
Indicator 5C	Education Environment Rate -- Sep Schls	737	36	0.05 (5%)	0.0125	0.17215	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0966 Billings H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0966 Billings H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0789 Birney Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0789 Birney Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0789 Birney Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0789 Birney Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0789 Birney Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0789 Birney Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0789 Birney Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0215 Bloomfield Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0215 Bloomfield Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0215 Bloomfield Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0215 Bloomfield Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0215 Bloomfield Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0215 Bloomfield Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0968 Blue Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0968 Blue Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0968 Blue Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	26	26	1 (100%)	0.8713	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	26	18	0.69 (69%)	0.46199	0.855	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	23	12	0.52 (52%)	0.27041	0.76252	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	23	3	0.13 (13%)	0.01115	0.66466	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	23	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0968 Blue Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0968 Blue Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0590 Bonner Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0590 Bonner Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0590 Bonner Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	106	100	0.94 (94%)	0.87962	0.97438	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	106	34	0.32 (32%)	0.18911	0.48878	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0590 Bonner Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0590 Bonner Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	60	58	0.97 (97%)	0.88438	0.99099	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	60	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	60	1	0.02 (2%)	-0.00001	0.80028	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0590 Bonner Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0590 Bonner Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0456 Boulder Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0456 Boulder Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	44	38	0.86 (86%)	0.72105	0.93947	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	44	11	0.25 (25%)	0.08507	0.54431	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0456 Boulder Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0456 Boulder Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	26	18	0.69 (69%)	0.46199	0.85499	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	26	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	26	4	0.15 (15%)	0.01917	0.6276	0.018 (1.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0456 Boulder Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0456 Boulder Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0425 Box Elder Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0425 Box Elder Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0425 Box Elder Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	48	42	0.88 (88%)	0.74282	0.94435	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	28	1	0.04 (4%)	0.00024	0.8079	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	28	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0425 Box Elder Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0425 Box Elder Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0426 Box Elder H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0426 Box Elder H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	16	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0426 Box Elder H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0426 Box Elder H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0426 Box Elder H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	16	7	0.44 (44%)	0.16349	0.75578	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	16	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	16	1	0.06 (6%)	0.0009	0.81831	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0426 Box Elder H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0070 Boyd Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name

0070 Boyd Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0070 Boyd Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0070 Boyd Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0070 Boyd Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0070 Boyd Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0070 Boyd Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0350 Bozeman Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0350 Bozeman Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0350 Bozeman Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	488	481	0.99 (99%)	0.97055	0.99307	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	488	236	0.48 (48%)	0.42062	0.54712	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0350 Bozeman Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	58	41	0.71 (71%)	0.55477	0.82358	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0350 Bozeman Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0351 Bozeman H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	39	28	0.72 (72%)	0.53316	0.85016	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0351 Bozeman H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	154	5	0.03 (3%)	0.00122	0.46989	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0351 Bozeman H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	58	57	0.98 (98%)	0.90758	0.997	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	58	17	0.29 (29%)	0.13211	0.53034	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0351 Bozeman H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0351 Bozeman H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	154	38	0.25 (25%)	0.1373	0.40268	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	154	38	0.25 (25%)	0.1373	0.40268	0.12 (12%)	Not Met
Indicator 5C	Education Environment Rate -- Sep Schls	154	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0351 Bozeman H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District Name 0059 Bridger K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0059 Bridger K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	14	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0059 Bridger K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	32	36	1 (100%)	0.9036	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	32	12	0.38 (38%)	0.16497	0.64564	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0059 Bridger K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0059 Bridger K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	26	16	0.62 (62%)	0.37781	0.80829	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	26	2	0.08 (8%)	0.00279	0.70742	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	26	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0059 Bridger K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0059 Bridger K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0705 Broadus Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0705 Broadus Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0705 Broadus Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	24	24	1 (100%)	0.86205	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0705 Broadus Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0705 Broadus Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	17	15	0.88 (88%)	0.63936	0.96947	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	17	2	0.12 (12%)	0.0064	0.73171	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	17	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0705 Broadus Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0705 Broadus Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0978 Broadview Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0978 Broadview Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0978 Broadview Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	26	24	0.92 (92%)	0.74981	0.97963	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0978 Broadview Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0978 Broadview Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0979 Broadview H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0979 Broadview H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0979 Broadview H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0979 Broadview H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0979 Broadview H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0979 Broadview H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0782 Brockton Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0782 Brockton Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0782 Brockton Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0782 Brockton Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	24	10	0.42 (42%)	0.17901	0.70055	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	24	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	24	1	0.04 (4%)	0.00035	0.81024	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0782 Brockton Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0782 Brockton Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0783 Brockton H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0783 Brockton H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	18	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0783 Brockton H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	15	0.83 (83%)	0.5839	0.94688	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	18	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	18	1	0.06 (6%)	0.00069	0.81564	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0783 Brockton H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0783 Brockton H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0749 Brorson Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0749 Brorson Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0749 Brorson Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0749 Brorson Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0749 Brorson Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0749 Brorson Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

For School Year: 2005-2006

District Name 0749 Brorson Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0400 Browning Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0400 Browning Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	232	220	0.95 (95%)	0.91057	0.9706	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	232	13	0.06 (6%)	0.00787	0.30667	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0400 Browning Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0400 Browning Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	152	82	0.54 (54%)	0.43224	0.64316	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	152	4	0.03 (3%)	0.00063	0.51601	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	152	1	0.01 (1%)	-0.00007	0.79617	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0400 Browning Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	21	7	0.33 (33%)	0.10559	0.67915	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0400 Browning Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0401 Browning H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	34	19	0.56 (56%)	0.34505	0.7528	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0401 Browning H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	108	15	0.14 (14%)	0.03984	0.38513	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0401 Browning H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	42	40	0.95 (95%)	0.83829	0.98722	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0401 Browning H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0401 Browning H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	108	21	0.19 (19%)	0.07902	0.40433	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	108	16	0.15 (15%)	0.04573	0.38676	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	108	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0401 Browning H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0401 Browning H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0840 Butte Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0840 Butte Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0840 Butte Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	536	533	0.99 (99%)	0.98363	0.9981	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	536	152	0.28 (28%)	0.21795	0.35988	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0840 Butte Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0840 Butte Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	373	202	0.54 (54%)	0.4727	0.60885	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	373	60	0.16 (16%)	0.08885	0.27366	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	373	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0840 Butte Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	56	41	0.73 (73%)	0.58112	0.84339	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

For School Year: 2005-2006

District Name 0840 Butte Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1212 Butte H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	48	32	0.67 (67%)	0.49344	0.80417	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1212 Butte H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	164	15	0.09 (9%)	0.02019	0.32926	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	74	74	1 (100%)	0.95066	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	74	14	0.19 (19%)	0.06242	0.44976	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1212 Butte H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1212 Butte H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	164	94	0.57 (57%)	0.47224	0.66835	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	164	33	0.2 (20%)	0.0992	0.36552	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	164	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1212 Butte H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0889 Bynum Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0889 Bynum Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0889 Bynum Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

0889 Bynum Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0889 Bynum Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0889 Bynum Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0813 Camas Prairie Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0813 Camas Prairie Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0813 Camas Prairie Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0969 Canyon Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0969 Canyon Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0969 Canyon Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	38	38	1 (100%)	0.90821	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	38	22	0.58 (58%)	0.37648	0.75795	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0969 Canyon Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0969 Canyon Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	26	22	0.85 (85%)	0.64638	0.94303	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	26	2	0.08 (8%)	0.00279	0.70742	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	26	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0969 Canyon Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0458 Cardwell Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0458 Cardwell Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0458 Cardwell Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0458 Cardwell Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0458 Cardwell Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0097 Carter County H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0097 Carter County H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0097 Carter County H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0097 Carter County H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0097 Carter County H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0159 Carter Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0159 Carter Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0159 Carter Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0159 Carter Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0159 Carter Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0159 Carter Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0101 Cascade Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0101 Cascade Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0101 Cascade Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	36	36	1 (100%)	0.9036	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	36	22	0.61 (61%)	0.40591	0.78329	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0101 Cascade Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0101 Cascade Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	26	16	0.62 (62%)	0.37781	0.80829	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	26	2	0.08 (8%)	0.00279	0.70742	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	26	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0101 Cascade Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0101 Cascade Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0102 Cascade H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0102 Cascade H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0102 Cascade H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0102 Cascade H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0102 Cascade H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0102 Cascade H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0317 Cayuse Prairie Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0317 Cayuse Prairie Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0317 Cayuse Prairie Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	38	38	1 (100%)	0.90821	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	38	18	0.47 (47%)	0.26885	0.68777	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0317 Cayuse Prairie Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0317 Cayuse Prairie Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	18	9	0.5 (50%)	0.2265	0.77349	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	18	2	0.11 (11%)	0.00573	0.7279	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	18	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0317 Cayuse Prairie Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0104 Centerville Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0104 Centerville Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	34	36	1 (100%)	0.9036	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	34	14	0.41 (41%)	0.20159	0.65993	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0104 Centerville Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0104 Centerville Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	20	13	0.65 (65%)	0.38542	0.84616	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	20	1	0.05 (5%)	0.00055	0.81349	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	20	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0104 Centerville Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0104 Centerville Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0105 Centerville H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0105 Centerville H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0105 Centerville H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0105 Centerville H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0105 Centerville H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0105 Centerville H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0105 Centerville H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1205 Charlo Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1205 Charlo Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1205 Charlo Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	56	58	1 (100%)	0.9379	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	56	15	0.27 (27%)	0.10968	0.52067	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1205 Charlo Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	42	19	0.45 (45%)	0.2561	0.66467	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	42	7	0.17 (17%)	0.03341	0.53608	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	42	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1205 Charlo Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1205 Charlo Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1206 Charlo H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1206 Charlo H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	22	1	0.05 (5%)	0.00044	0.81172	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1206 Charlo H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1206 Charlo H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1206 Charlo H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	22	3	0.14 (14%)	0.01212	0.66889	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	22	5	0.23 (23%)	0.04514	0.64634	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	22	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1206 Charlo H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1236 Chester-Joplin-Inverness El

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1236 Chester-Joplin-Inverness El

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	46	46	1 (100%)	0.92295	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	46	24	0.52 (52%)	0.33316	0.70432	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1236 Chester-Joplin-Inverness El

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1236 Chester-Joplin-Inverness El

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	30	17	0.57 (57%)	0.34127	0.76749	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	30	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	30	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1236 Chester-Joplin-Inverness El

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.
* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1236 Chester-Joplin-Inverness El

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1237 Chester-Joplin-Inverness HS

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1237 Chester-Joplin-Inverness HS

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	15	1	0.07 (7%)	0.00103	0.8199	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1237 Chester-Joplin-Inverness HS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1237 Chester-Joplin-Inverness HS

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1237 Chester-Joplin-Inverness HS

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1237 Chester-Joplin-Inverness HS

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0028 Chinook Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0028 Chinook Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	36	42	1 (100%)	0.91622	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	36	12	0.33 (33%)	0.13809	0.60938	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0028 Chinook Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0028 Chinook Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	28	21	0.75 (75%)	0.53673	0.88597	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	28	2	0.07 (7%)	0.0024	0.70404	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	28	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

District Name

0028 Chinook Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District Name 0029 Chinook H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	13	8	0.62 (62%)	0.29832	0.85759	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0029 Chinook H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	25	2	0.08 (8%)	0.00301	0.70931	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0029 Chinook H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0029 Chinook H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0029 Chinook H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	25	13	0.52 (52%)	0.27677	0.7541	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	25	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	25	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0029 Chinook H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent
Montana Office of Public Instruction

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0029 Chinook H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0883 Choteau Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0883 Choteau Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0883 Choteau Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	66	66	1 (100%)	0.94501	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	66	19	0.29 (29%)	0.13446	0.51263	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0883 Choteau Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	45	19	0.42 (42%)	0.23231	0.63828	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	45	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	45	1	0.02 (2%)	0.00004	0.80252	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0883 Choteau Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	10	2	0.2 (20%)	0.01755	0.77696	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0883 Choteau Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0884 Choteau H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0884 Choteau H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0884 Choteau H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0884 Choteau H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0884 Choteau H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0884 Choteau H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0547 Circle Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0547 Circle Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0547 Circle Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	34	34	1 (100%)	0.89851	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0547 Circle Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0547 Circle Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	23	16	0.7 (70%)	0.45179	0.86376	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	23	4	0.17 (17%)	0.02392	0.64333	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	23	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0547 Circle Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0547 Circle Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0548 Circle H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0548 Circle H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
